PGx Cohort

Assess risk for **Opioid ED** or **Polypharmacy**. Select the cohort with the tabs above; age selects the age band within that cohort (both cohorts use the full set of age bands).

Uses best-performing model for the selected cohort and age band (CatBoost, XGBoost, or XGBoost RF — shown after calculation).

Age band 0-12 is excluded. Use the **Opioid ED** or **Polypharmacy** tab above to switch cohort.

Opioid ED

AGE

35

Cohort is set by the tabs above. Age (0-114) selects the age band; risk requires age 13+.

No codes selected. Go to **Drugs, CPT Codes, or ICD Codes** tab to add codes; those selections are used for the risk calculation below.

Edit codes

Optional — Patient counts (per mi_person_key):
