

PGx Risk Assessment Dashboard

Opioid ED

Polypharmacy

Risk Assessment	Drugs	ICD Codes	CPT Codes	PGx Card	Documentation
Feature Importance	Causal Analysis	BupaR Process Mining	DTW Trajectories		FP-Growth Patterns

Research focus: N1 — Routine vs no routine (admin ICDs). N3 — Times between sequences (mean days between events; time to target.)

DTW: trajectory overview, sample trajectories, routine vs no routine comparison, high-risk trajectories, times between sequences (N3), and target pathway patterns. Data: full pipeline (2016–2019).

COHORT:

Opioid ED

Trajectory Analysis Overview

Sample Trajectories

Trajectory Metrics

Metric

Routine vs No Routine (Outcomes)

Is there a difference in outcomes for patients without routine appointments vs those with routine care? (Admin ICDs vs number of ICD events.) Shown over full pipeline (2016–2019).

Routine vs non-routine comparison will appear here when the pipeline provides this view (e.g. outcome by admin ICD count or protocol flag).

High-Risk vs Low-Risk Trajectories

Identify trajectory archetypes stratified by outcome/risk (high-risk vs low-risk).

High-risk vs low-risk trajectory stratification will appear here when the pipeline provides this view (e.g. trajectory archetypes by target status or risk band).

Times Between Sequences (N3)

What are the times in between sequences that lead to target outcomes? Mean days between consecutive events and mean days from first event to target, by routine vs no routine.

Times between sequences (N3) will appear here when the pipeline provides time-between metrics.

Target Pathway Patterns

Common activity codes in trajectories leading to the target outcome (target=1).

Target pathway patterns will appear here when the pipeline provides this view.

Common Sequences Heatmap

How often each code appears at each position in trajectories. Darker = more common. Filter by code type (cohort and age band set above).

CODE TYPE:

ICD

Sequence heatmap will appear here when the pipeline provides sequence_heatmap.json (by cohort and age band). Use the code type dropdown to filter ICD, CPT, or Drug.
